

Handwritten Urdu Alphabets Recognition System

1. P

Build a system to recognize handwritten Urdu alphabets from mobile-camera images collected by the student.

- Total classes: 40

- Im

- Grayscale conversion and normalization to 0-1

- Aug

- DNN: 2 hidden layers (512, 256) with dropout

- CN

- DNN test accuracy: 0.0255

- CN

CNN typically performs better on image data due to spatial feature learning, while DNN is simpler but less robust.
